

## Our research shows that LEAs spend \$40 million to correct nearly 2,000,000 SAIS errors EVERY YEAR.

SAIS consists of two components:

- ★ Student
- ★ School Finance

The systems we need must be able to retrieve a wide range of data from a single, reliable source.

ADE is using the Ed-Fi tool to standardize the way data is collected, eliminating the errors created by uploading to SAIS.

*Student Replacement* creates one single source of student-level data in Arizona schools, thereby eliminating the 2,000,000 yearly errors.

This work eliminates redundant ADE applications and reduces duplicative, wasteful and expensive reporting burdens on LEAs.

Creating a single source of student-level data allows educators to follow student achievement past secondary education and correlate that back to their school(s) and teachers.

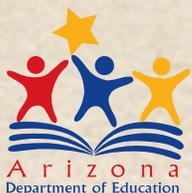

★ 80% of Student Replacement will be completed in FY2014. The remaining work will be completed in FY2016.

★ 85% of School Finance Replacement will be completed in FY2015, with the remaining work completed in FY2016.

*School Finance Replacement* allows policy makers to ask *what if* questions regarding state funding changes and get answers within a few days. Policy makers can be assured of accurate distribution of state aid funding.

Most importantly, putting a modern payment system in place makes state funding calculations and distributions auditable and traceable, which they currently are not.

*Work done to streamline School Finance processes has already reduced processing times from days, weeks and occasionally months to mere minutes.*

**ADE processes nearly \$5B a year on a failing, outdated payment system.**
