

Beginning spring 2023, ACT will support the use of Apple iPad devices on the ACT test taken as part of ACT State and District computer-based testing. The ACT National test currently is not available for digital devices.

Note: iPads will not be supported prior to the first test administration in spring 2023.

Schools who plan to allow iPads for testing are encouraged to prepare, and help students prepare, by using the practice test in TestNav. For practice/non-secure tests, students can use the TestNav app. In practice sessions, students should use the device and any embedded accessibility features they plan to test with on test day.

Students testing with iPads will be able to utilize available accessibility features and authorized accommodations and language supports. However, support for iPads with assistive technology devices remains in development. Students authorized to test with assistive technology devices will be able to test on a laptop or desktop computer or via paper testing.

iPad devices used on the ACT test must meet the following minimum hardware and software specifications.

Software

Operating System	iOS 15.2 or above
------------------	-------------------

Hardware

Memory	1 GB RAM (2 GB is recommended)
Screen size	9.5 inch
Resolution	1024 x 768 pixels
Other	A physical keyboard is required to take the ACT writing test

For more information, see the [ACT Technical Guide for Online Testing](#).
