Public Schools find success at a Student Data Privacy Community of Practice

TrustEd Apps Arizona in collaboration with 1EDTECH

As K12 schools continue to adopt new online resources to facilitate learning, their exposure to security vulnerabilities also grows.

Schools participating in the **Student Data Privacy Community of Practice** are using the resources from 1EdTech to get access to expert vetting of online applications. Early adopters in this program learn from one another and advance together through collaboration and shared knowledge. The goal of the community is to define guidelines and parameters for Student Data Privacy in Arizona and support the expansion of this work across all local education agencies in the State.

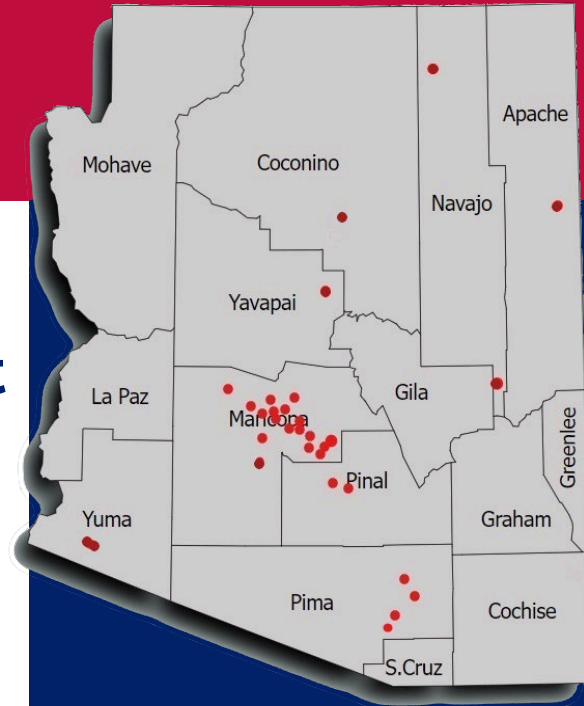

What are school districts saying?

"The TrustEd Apps initiative has provided clarity and understanding around our district's responsibilities for protecting students' data...The incredible list of pre-vetted apps and quick access to requesting additional resources to be vetted allows us to make quicker, more appropriate decisions when new apps are requested."Emily Marshall. Assistant Director EdTech. Vail Unified District

"My experience participating in this [Community of Practice] has only good comments. Besides the benefits of getting a system [TrustEd Apps] that provides reliable information about the use of applications in the classroom, the networking and information-sharing atmosphere is priceless. The people in charge of this project are professional and always available to answer questions and open to hearing suggestions. On behalf of Sahuarita Schools, I thank you for providing the opportunity to participate in this project."Manny Villa. Director of Information Technology. Sahuarita Unified District

"I really feel more connected to the districts in my state since we have started this initiative. It has allowed for better networking opportunities and has opened the door for me to work with other districts and learn from what they have done. This has made a world of difference for me as I grow in this position and help to support the continual need for the survival of EdTech."Rae Mask. EdTech Instructional Coach. Balsz Elementary District

Arizona Early Adopters

An application process allowed for the identification of Local Education Agencies that would pioneer the implementation of TrustEd Apps in Arizona. This group of early adopters is testing the model and paving the way for Student Data Privacy in Arizona.

- Amphitheater Unified District
