How to use this chart

1. Locate the primary need on the left-hand side of the chart.
2. Once the primary need has been located, review each intersection with the corresponding column to determine if the secondary needs can be reported concurrently.

Example: DD is determined to be the primary need. After locating DD on the left side of the matrix, we find that intersections with DD, ED, EDP, PSD, and SID indicate that these needs cannot be reported secondary to DD.
